CLIENT

Rio Tinto Iron Ore

PROJECT

Western Turner Brockman

LOCATION

Pilbara, Western Australia

VALUE

AU\$305 million

START DATE

June 2011

FINISH DATE

November 2013

PROJECT SUMMARY

The Western Turner Brockman project comprised of simultaneous works in two separate locations, approximately 45 kilometres apart and was carried out by the Eastern Guruma and NRW joint venture.

The first component was the bulk earthworks required for 16 kilometres of overland conveyor from the Western Turner Syncline mine to Tom Price. This involved 7 million cubic metres of earthworks.

The second component was the civil works at the Brockman 4 Mine. This included haul roads, ROM and ROM wall construction, access roads and earthworks preparation for a conveyor to the existing crusher and load out facility. The second component also included 7,000 cubic metres of concrete.

Peak manning on the project exceeded 400
